Recent Project

1) **Project Name**: Wayfair (Official Site)

Project Summary: Wayfair is an Ecommerce business app where you can buy/sell products. Wayfair is supposed to manage the cart/payments/marketing - query generation platform through the Admin panel. For this company, we used to create and maintain the web - as per their business engineering requirements on query generation tools - helpful for marketer,

ex. Generate the query for the **User who are the customers for the last 10yrs**. Using this tool, Marketers can fetch the data just by generating a query on their own - we build up with the React Js.

Environment: React JS and Postgres.

URL: https://admin.wayfair.com/d/segmentation-ui/overview

2) **Project Name**: Gosite (Official Site)

Project Summary: GoSite offers the best small business apps to manage, run, and grow your business online. For this company, we used to create and maintain the web - as per their business engineering requirements. We used to create the backend content through a **Strapi** tool and display the front-end with Next Js and React Js.

Environment: Next JS, React JS and Strapi.

URL: https://www.gosite.com/

3) **Project_Name**: CondeNast (Official Site)

Project Summary: Condé Nast is a global mass media company founded in 1909 by Condé Montrose Nast, and owned by Advance Publications. For this company, we used to create and maintain the web - as their business engineering requirements. We used to create the backend content through a **contentful** app and display the front-end with Next Js and React Js.

Environment: Next JS, React JS and Contentful.

URL: https://www.condenast.com/

4) **Project_Name**: Rentall

Project Summary: This project is a home stay project which is only applicable for women. This site is like an Airbnb website, when a user visits some places, They can book by viewing particular house details such as Beds, Rent, Bathroom, and how many days they will be available to stay. All these details will be present as Host advisor in the site. Here, basically free to become a host. Moreover, here admin can earn money as a service charge from both host and guest.

Environment: React JS, Sequelize, Apollo server, and MySql.

URL: https://demo.rentallscript.com/ **(Online Home Rent/Stay)**

5) **Project_Name**: Golightly

Project Summary: This project is a home stay project which is only applicable for women. This site is like an Airbnb website, when a user visits some places, She can book by viewing particular house details as Beds, Rent, Bathroom, and how many days they will be available to stay. All these details will be present as Host advisor in the site. Here, basically free to become a host. Moreover, here admin can earn money as a service charge from both host and guest.

Environment: React JS, Sequelize, Apollo server, and MySql.

URL: http://www.wegolightly.com/ (Online Home Rent/Stay)

6) **Project Name**: Defamation

Project Summary: This project is used to monitor the Internet for negative information about your brand or employees and sends an immediate alert to respective users. This system analyses the top 100 ranking sites from Google and Bing for your searching exact keyword(Product/employee) and fetches the data(Post/comments).

Environment: Codeigniter PHP, MySql , CSS, jQuery and HTML

URL1: http://www.defamationmonitor.com/ (Online Defamation Monitor)
URL2: https://www.repumatic.com/

7) **Project Name**: Prezentium

Project Summary: This project is an official payable project which is used to download particular ppt files. I have developed some advanced features with this site like export the table as csv for all table data and filter the selected column.

Extra- Responsibility: Attending Direct Client calls every day and satisfying client requirements by completing tasks.

Environment: Codeigniter PHP, MySql , CSS, jQuery and HTML
